Daikin's HVAC Innovation Roadshow hits the highways this May bringing an immersive, interactive experience to more than 37 cities across U.S. and Canada. This inaugural tour comes to The HUB Stadium on October 3, 2018 and carries the latest technology – both HVAC and experiential marketing – to bring the Daikin story to life for you.

This decked out trailer features hydraulic “wings” that spread to create a show filled with hands-on product displays as well as “build your own” stations. You'll step into an augmented-reality cityscape that lets you fly over the landscape to delve into buildings and solutions that matter most.

The inaugural roadshow will feature embedded technology such as variable volume ratio compressor, magnetic bearing compressors, inverter compressor, ECM developments, and Intelligent Solutions. Product showcases will include: SmartSource WSHP, DOAS development for WSHP, ThinLine fan coils as well as PreciseLine blower coil.

Watch for innovation rolling into Auburn Hills and plan to step into the New Cool and the Future of HVAC with us.
