

VRV System Design and Best Practices

The 1-Day Daikin VRV Design course teaches, through the use of interactive activities, how to properly design Daikin VRV system applications. Participants will learn principals of VRV systems design, how to lay out a system and best practice tips to help ensure a successful VRV job. Attendees will also get hands on training with the Daikin VRV Xpress design software while learning how to access valuable equipment documentation. Space is limited in this interactive class that includes individualized guidance and feedback from Daikin factory training facilitators.

This FREE training is eligible for 8 Continuing Education Units (CEU)
